Coles Center for Cybersecurity Education

September 21, 2026

To Whom It May Concern:

I am pleased to provide this letter in recognition of Mr. Pravin Khandke for his contribution as an invited external industry speaker for the Kennesaw State University Center for Cybersecurity Education.

On September 17, 2026, Mr. Khandke delivered a presentation entitled "Adversarial Resilience: Building AI Systems That Survive Hostile Environments" to members of the Kennesaw State University community. As an accomplished cybersecurity professional and respected industry leader, he shared practical insights and real-world perspectives on the challenges of developing and securing artificial intelligence systems operating in adversarial environments.

Mr. Khandke participated as an outside industry speaker, bringing valuable practitioner experience to our students, faculty, alumni, and cybersecurity professionals. His presentation provided attendees with a deeper understanding of emerging threats to AI systems, resilience strategies, and the importance of integrating security considerations throughout the AI lifecycle.

The session was conducted as a hybrid event with both in-person and virtual participation. The presentation generated strong engagement from attendees and was followed by thoughtful discussion and audience interaction. It was attended by 8 people in person and 24 remote attendees.

Kennesaw State University recorded the session and has made it available as part of our continuing efforts to provide educational and professional development resources to our students. This allows the value of Mr. Khandke's presentation to extend beyond the live event and reach a broader audience.

We are grateful for Mr. Khandke's willingness to share his expertise and professional experience with our students and colleagues. Industry speakers play an important role in helping bridge the gap between academic preparation and current professional practice, and his contribution was greatly appreciated.

On behalf of Kennesaw State University and the Center for Cybersecurity Education, I extend our sincere thanks to Mr. Khandke for his participation and support. We would be pleased to welcome him back for future programs and events.

Sincerely,

Dr. Herbert Mattord

Professor of Information Systems and Security
